DETAILED ACTION

1. In response to amendment filed on 2 December 2005. Claims 9, 10, 12, 21, 22, 24, 33, 34, and 36 are amended; claim 38 is new. Amendments to the claims are accepted.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 9-12, 21-24, 33-36, and 38 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7, 13-19, 25-31, and 37 copending Application No. 09/784,254. This is a provisional double patenting rejection since the conflicting claims have not yet been patented. Although the conflicting claims are not identical, they are not patentably distinct from each other because an obvious variant of an encryption method would be a method of decryption in order to obtain the original data. To transfer messages and protect the messages with encryption has minimal value if the receiver of the encrypted message does not have a means to decrypt the encrypted message.

Allowable Subject Matter

4. The pending claims 9-12, 21-24, 33-36, and 38 would be allowed if a terminal disclaimer was filed to overcome the double patenting rejection noted above. The following is an examiner's statement of reasons for allowance: Claims 9-12, 21-24, 33-36, and 38 would be allowed due to amendment on 2 December 2005 and arguments presented beginning on page 15, that in the reference 'the decryption operation is a different order and combination than the claimed invention, the reference consist of one round of an XOR3 operation, a shuffle operation, and an XOR1 operation whereas the claimed invention 1st operation uses a feedback back value from the result of order cipher text value which utilizes two random numbers which are generated in complete isolation from any of said plurality of cipher text blocks'.
